Intro

Trading, as a phenomenon, serves society by regulating the assessment of economic entities. Each trader does useful work in analyzing the market, companies and their quotes. A trader, like no one else, is oriented in values and the balance of power on the economic map, which allows him to make profitable transactions.

Systematic profitable trades indicate a deep understanding of the market. But each trader is limited in the number of transactions he can make thoughtfully.

Which prompted our team to develop solutions that help scale operations for traders who know their business. The main idea is to increase the trader's available capital to manage without increasing the workload on the trader himself.

1.2 BuyCrypt Company

A group of enthusiasts spontaneously gathered around the solution of problems of the cryptocurrency industry, retained and increased its composition. Now the team consists of 20 talented people, united by common interests, and not corporate obligations.

A year of productive collaboration inspired us to expand our activities from developing trading tools to collective asset management systems and our own trading platform with premarket, spot and futures trading. The company is actively connecting partners and building up its community.

What is BuyCrypt and why \$BUYT

BUYT is the central token of our platform, which underlies all processes. It is a utility token used for various functions and operations within the BuyCrypt ecosystem.

BuyCrypt is an application that creates ratings of the best traders, checking their successes publicly. Users can get among the best by participating in tournaments with cash prizes or by connecting the API from the exchange to analyze their statistics.

BuyCrypt is the official broker of Binance, ByBit, WhiteBit.

All rights belong to BuyCrypt Inc. — The corporation is registered:

BuyCrypt Inc, DUNS registration number: 117803141. Registered address: 8The Green, Ste A ZIP 19901, Dover, United States of America.

1.3 Problems and solutions

Trading

Systematic profit-making through trading requires full immersion in the market. A professional trader works full time, every day, and makes many transactions to understand the market situation.

You can be an amateur and occasionally get into profit, but as we know, only a small part of traders trade in plus (about 7%). Lack of time encourages people to look for a ready-made solution that will help to effectively learn and trade.

The search for the golden pill creates demand for signals and recommendations. But due to the lack of any regulation, the market responds with false signals and falsified trading history. Most people check the source on their own experience and do not always get what they want.

How to earn more?

A trader who is firmly in the market could increase profits from each transaction by having access to liquidity. But he physically does not have time to attract funds for management.

This is a different type of activity, requiring different skills and opportunities. Attracting money for management is a big risk, burdening the trader. After all, managing your own assets and attracted ones are completely different configurations of solutions.

1.3 Solutions

1

Reliable statistics

BuyCrypt uses its product to collect traders and analyze their performance. BuyCrypt sees trading statistics, which allows traders to be ranked by results. This opens up a number of opportunities for implementing automation solutions.

2

Copying trades

BuyCrypt uses its product to collect traders and analyze their performance. BuyCrypt sees trading statistics, which allows traders to be ranked by results. For amateur traders, this is an opportunity to trade like a professional trader.

3

Pay only for profit

Duplicated trade fees are only paid if ROE is positive.

4

Increase in profit

To encourage professional traders to share information, the BuyCrypt platform has developed a reward model that depends on the profit size of all copy traders. As the number of subscribers grows, the trader's profit will increase, which can exceed his own profit several times. At the same time, the trader manages his own funds, that is, he bears the same risks and does not have the burden of managing other people's assets.

5

Multi-account management

Often, a professional trader has many accounts on different exchanges. To simplify the management of all accounts, a solution for convenient management from one terminal has been developed. This allows you to simultaneously conduct several strategies, or duplicate one main one.

6

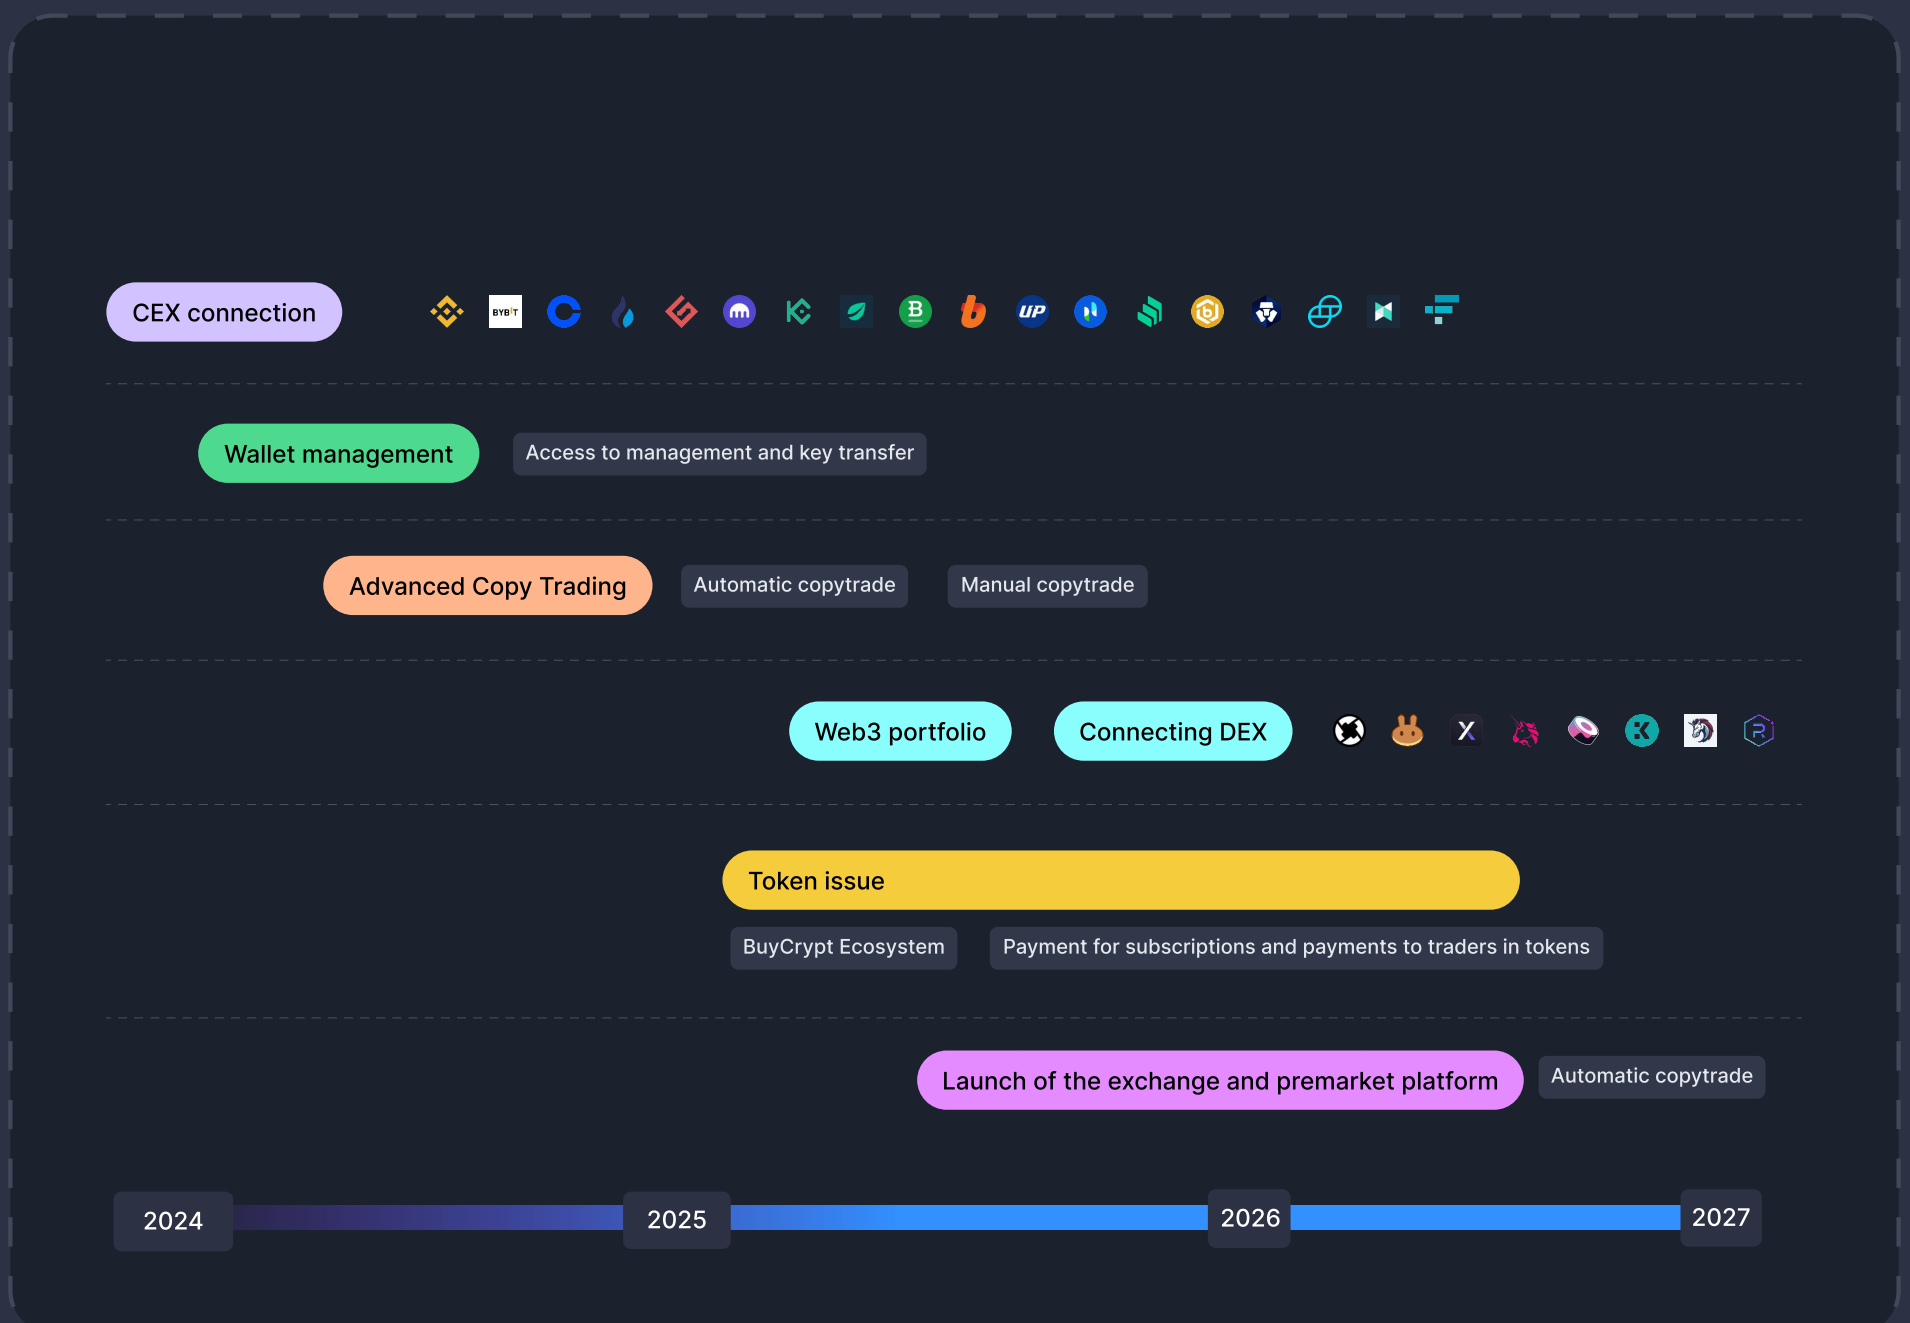

Transfer to management

In addition to copying, BuyCrypt is preparing a solution to transfer the account to an experienced trader for management. This requires more effort from the trader regarding access to copying transactions, and therefore changes the terms of remuneration in favor of the experienced trader.

1.4 Roadmap

Plans for the future

The company's goal is to organize collective asset management. Provide a platform for trading assets both on well-known CEX exchanges and on our own exchange and pre-market platform. Reduce losses by consolidating the knowledge of many traders and implementing balanced decision-making based on a fair reward system. This approach will lead to the most profitable use of assets, which will be attractive to the financial sector and accumulate more funds in the centralized and decentralized WEB3.

BUY AirDrop

2.1 BUYT value

Access to functionality

In addition to speculative interest, a number of opportunities and access to the full functionality of the system opens up for the token holder.

Access to the best traders

As you accumulate tokens, you will gain access to higher-quality traders, which will allow you to grow your capital more effectively.

Flexibility of management

The token serves as a buffer between third-party assets and the trader, which opens up risk management opportunities. Allows you to pay only for profitable trades and, in the event of unsuccessful trades, reuse tokens in profitable trades of another trader.

The model of payment for profitable transactions allows you to deactivate copy trading at any time and withdraw unused tokens. If necessary, reactivate - buy a token and enter it into a smart contract for copy trading.

Increase in potential profit

With the help of the token, you can pay commissions to traders who have brought profit. The more commissions you pay with the token, the larger amounts you can turn into profit.

By receiving commissions from providing trades for copying, a trader gains access to more capital, which increases his maximum profit from each successful trade. Which motivates the trader to trade better.

Rewards

Rewards to token holders on wallets.

For trading turnover through the BuyCrypt application.

For providing liquidity.

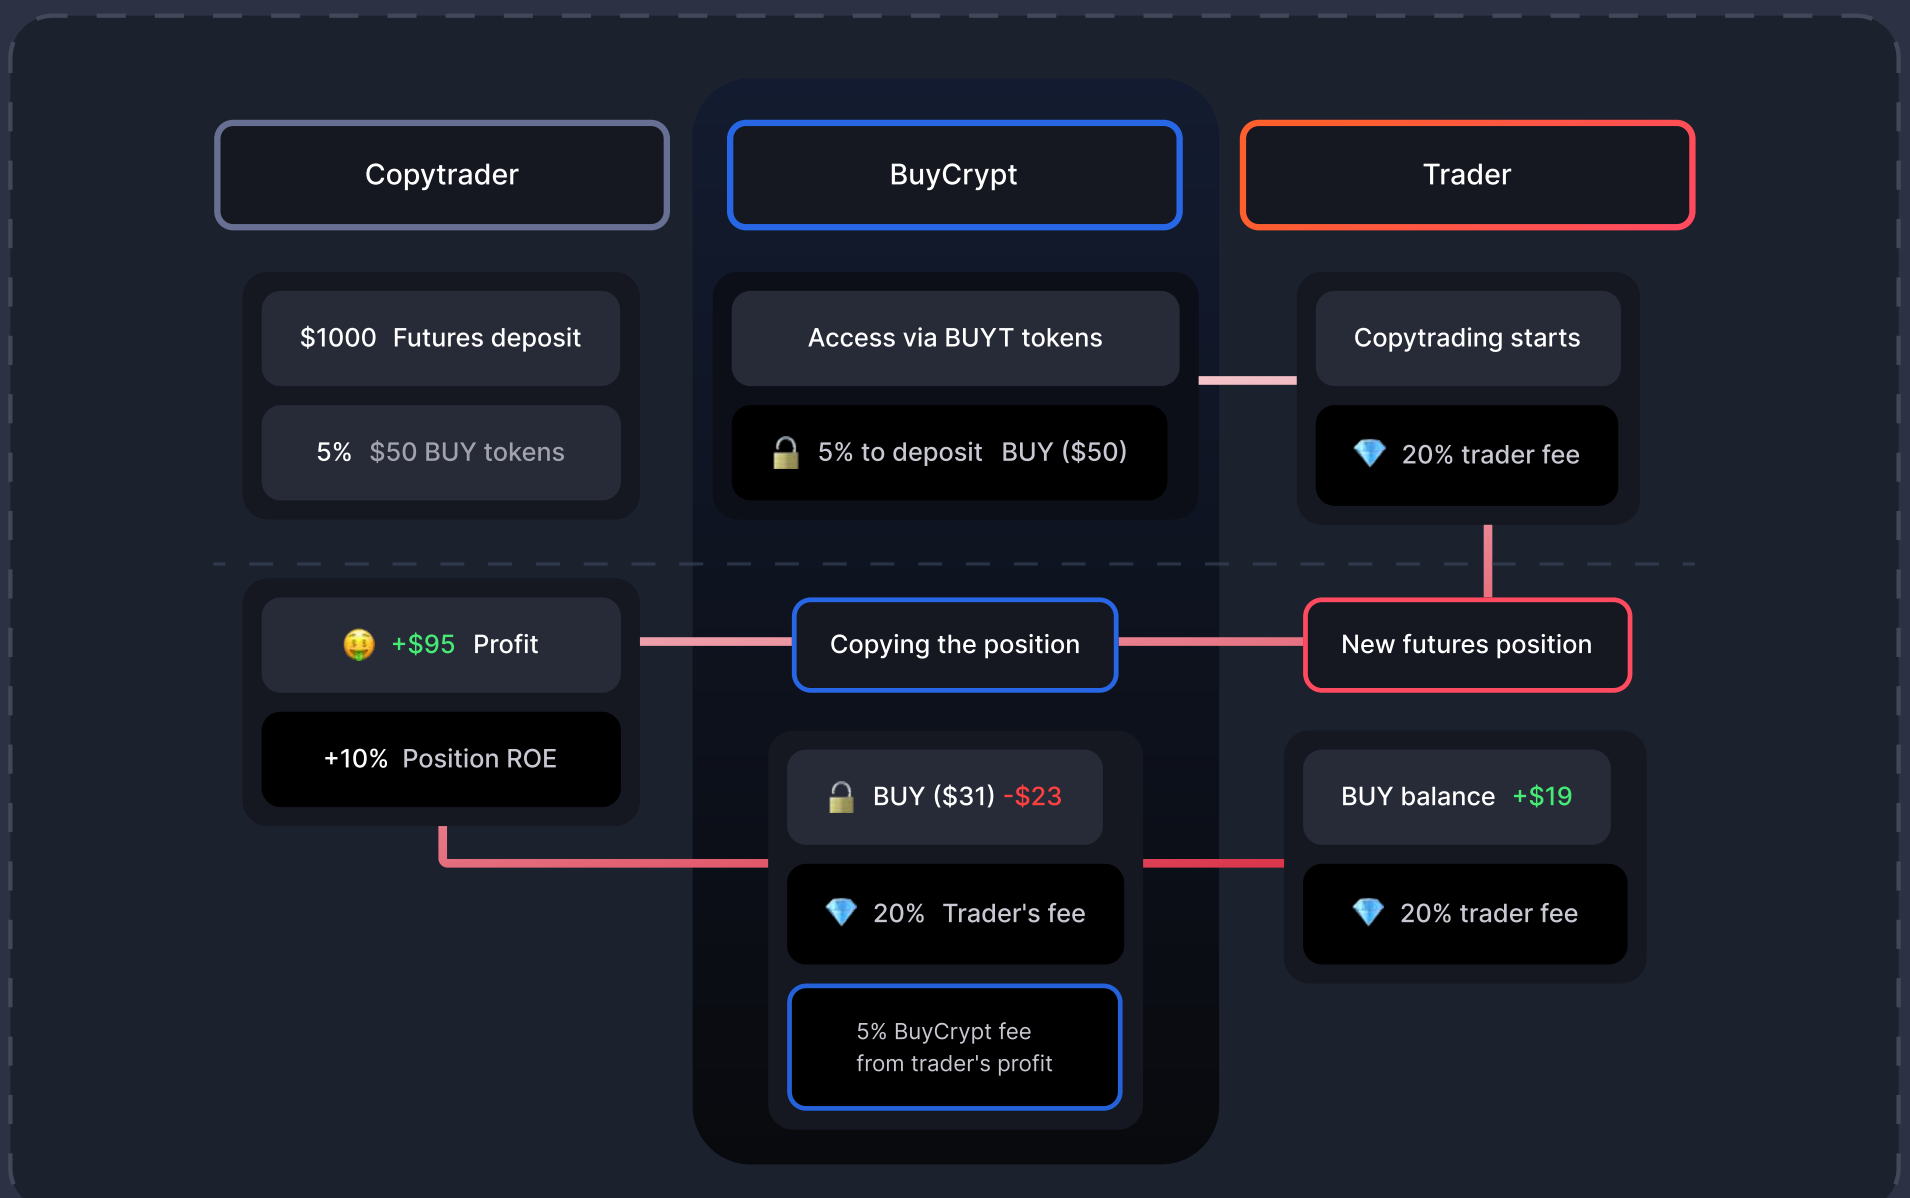

2.2 Accounts under management

BuyCrypt creates a unique list of the best traders, giving users the opportunity to transfer their accounts to professionals for management. This allows token holders to receive a percentage of profitable trades without having to participate in trading themselves. The basis of all transactions and the guarantee of their security is the BUYT token, which ensures transparency and reliability.

Benefits of using BUYT:

- **Security guarantee:** The BUYT token is used as a pledge of trust in the account management system.
- **Profit share:** Account holders and traders share the profit, which makes the model mutually beneficial.
- **Growing demand:** With an increase in the number of successful trades and the attraction of new users, the demand for BUYT will grow, supporting its value.
- **Staking and liquidity:** BUYT can be used for staking and increasing passive income, which attracts more investors and holders.

This system creates a closed economy, where the BUYT token becomes a key element ensuring active use and long-term growth.

2.3 BUYT implementation

- Season 1: Free **BUYT distribution** via Tap App
- Season 2: Free **BUYT Distribution** to Users in BuyCrypt App
- Season 3: Free **BUYT Distribution** to Traders in BuyCrypt App
- Launch of a series of tournaments with prize pools in USDT for **BUYT**
- Integration of **BUYT smart contracts** with BuyCrypt platform services
- Listing of **BUYT** on exchanges

2.4 Distribution plans

Networks and integrations

Mass free distribution of **BUYT** among all interested users in exchange for social activities and participation in affiliate marketing campaigns, the income from which will be additionally directed to the liquidity of the BUYT token on partner exchanges. Sending tokens to external wallets and exchanges will be available by connecting the API from available exchanges. The goal is to provide access to BUYT from popular CEX exchanges and decentralized DEX exchanges, for free circulation of BUYT in a user-friendly way.

Why get BUYT for free now?

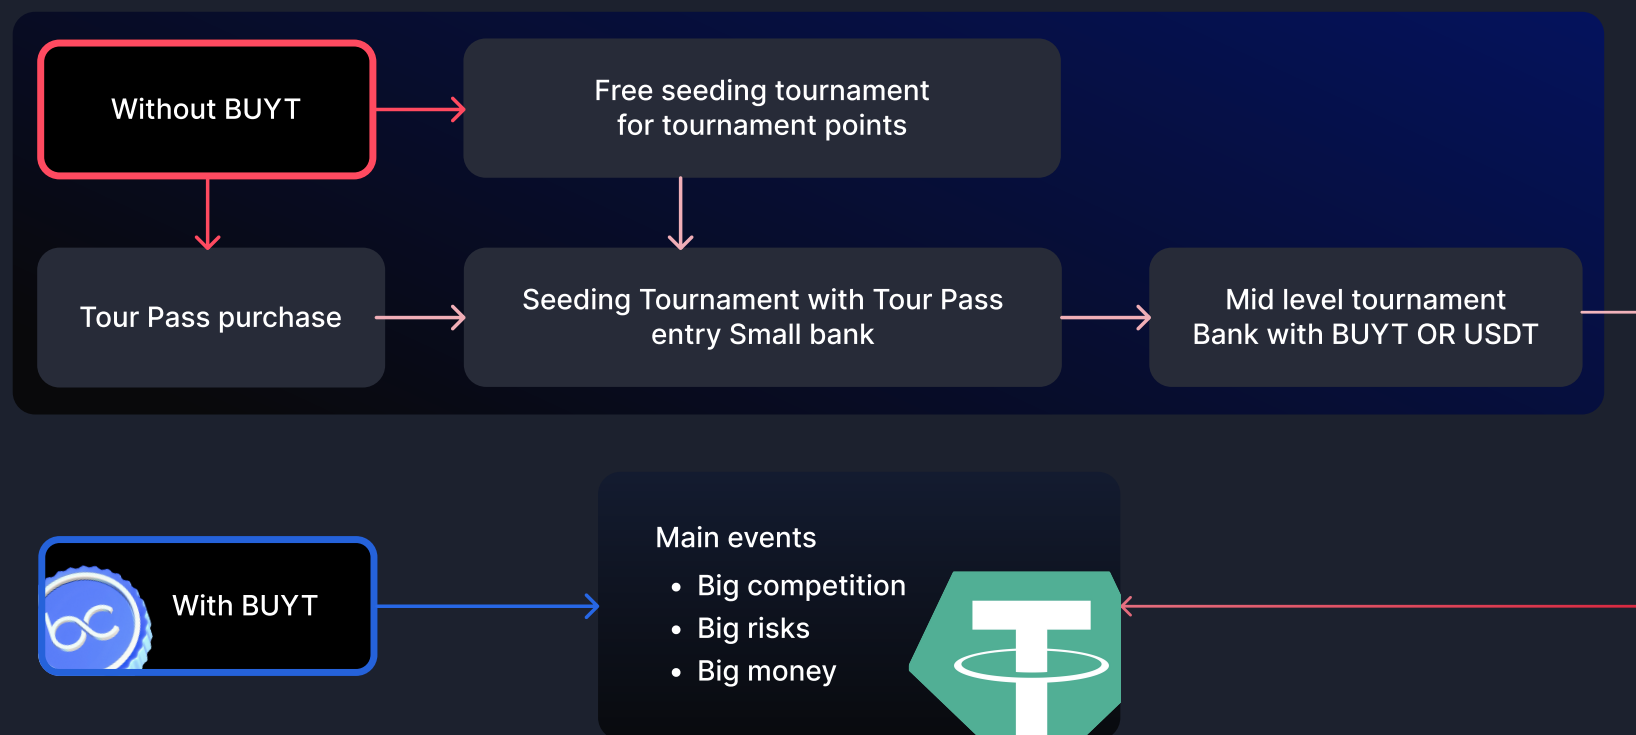

Participation in tournaments with prizes in USDT is available only with the Tour Pass, which is received after the qualifying rounds. **BUYT** allows you to participate in tournaments with prize pots, bypassing the qualifying stages. Also, BUYT allows you to buy accounts with real USDT for trading and getting profit from all positive transactions.

The received **BUYT** can be:

- Sold on the exchange
- Put in staking for interest
- Exchange for accounts with deposits
- Manage other people's accounts for a share of the profit
- Participate in tournaments
- Transfer management to other users for a percentage.

Commissions from successful transactions are paid in **BUYT** . Users can connect their accounts and make a profit with the best traders from the ratings without transferring funds.

2.5 Participation in tournaments with prize pots

Maintaining BUYT Liquidity through an Efficient Infrastructure

Our service is built on a well-thought-out system, where all internal functions and fees are paid in BUYT tokens. This creates a constant flow of liquidity due to active users of the application.

Main Types of Payments and Their Role

Every purchase and use of coins by users helps to finance key functions of the platform, such as:

- Small bank tournaments - an opportunity to participate and win, risking only small amounts. Support for beginners
- Mid-bank tournaments - created for more experienced traders who are ready to compete with the same confident traders for an impressive bank
- Main events and activities
- BUYT staking
- Airdrops for users
- Purchase of Prop accounts with deposits

Minimum Company Costs

Moreover, up to 80% of the prize funds of the "small bank" and "Mid level" tournaments are formed at the expense of funds spent by users on TourPass, which allows minimizing the company's costs and maintaining the stability of the system.

This model ensures stable growth and attractiveness of the BUYT token, maintaining high liquidity and community engagement.

2.6 Protocol mechanism

Access to history for holders

Accumulating certain amounts of tokens opens access to more successful traders.

Trading Rewards

The protocol rewards trading through BuyCrypt.

Access to tournaments

BUYT holders will have the opportunity to participate in trading tournaments with prize pots without going through the qualifying rounds.

Copy trading

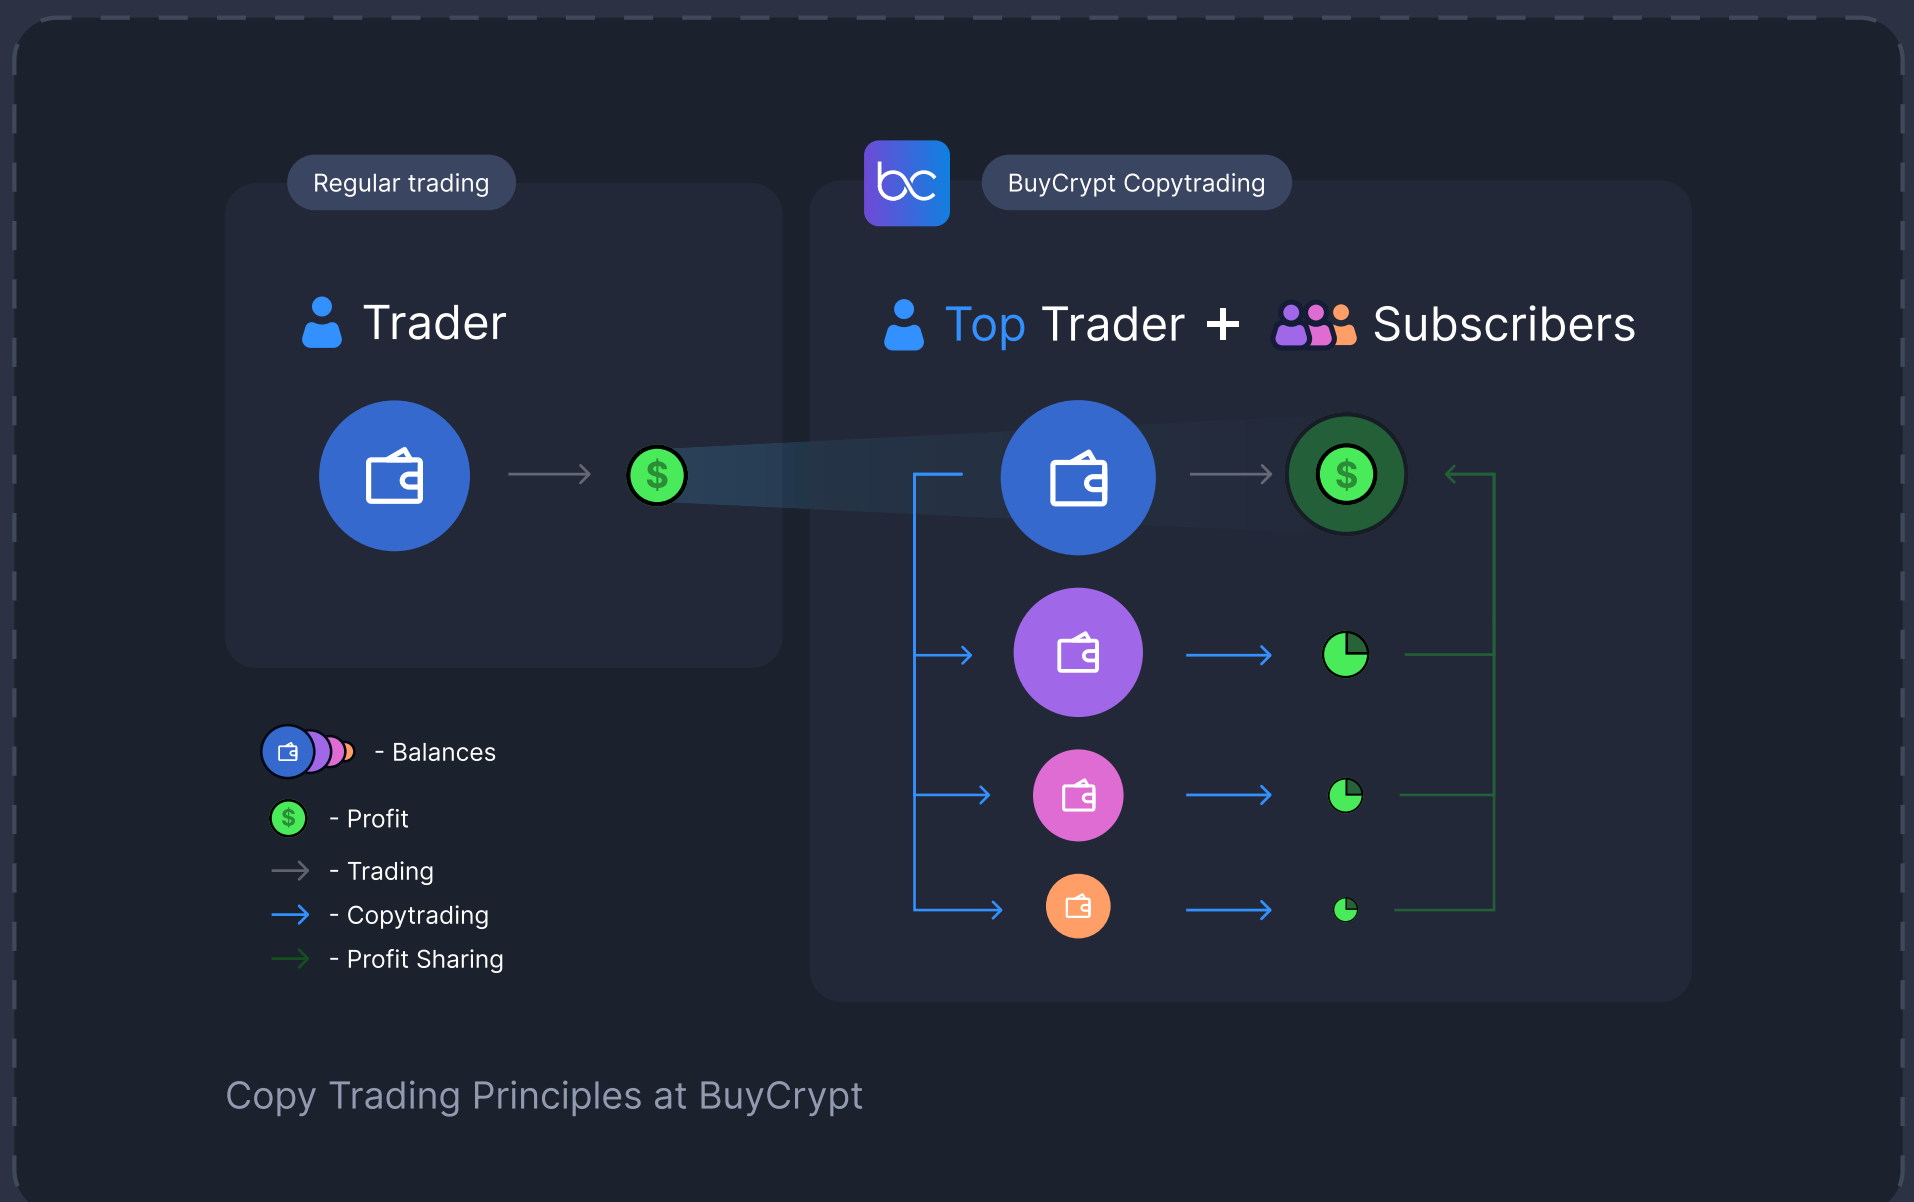

The protocol distributes commissions to traders from all subscribers according to their deposits.

Vesting contract

The contract unlocks funds for movement according to the embedded time algorithm.

Staking

Lock BUYT for a selected period to receive daily interest.

2.7 Tokenomics

Token Information

| | |
|--------|-----------------------------|
| Net | will be determined in 2025. |
| Offer | 200,000,000 |
| Ticker | BUY |

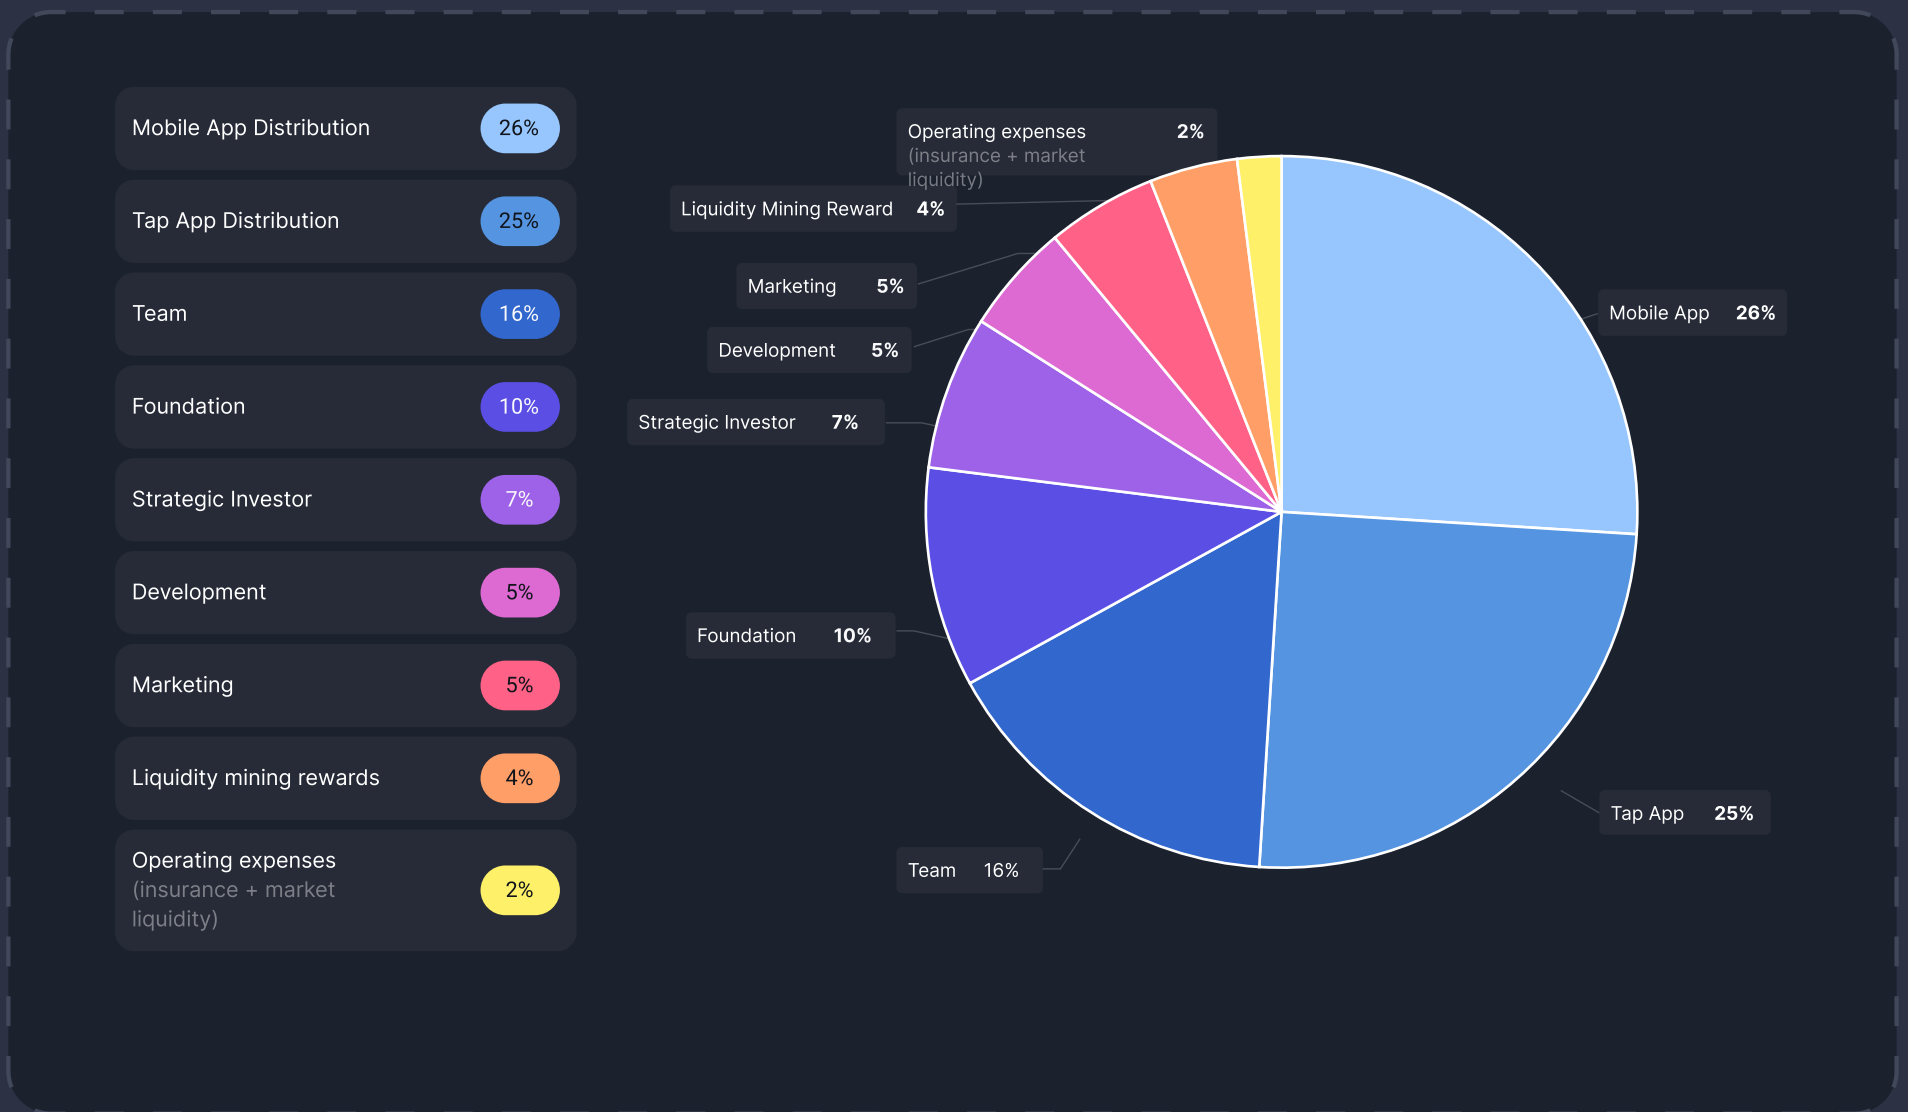

Token distribution
